## 2. Citations and explanations (Rule 70.7)

This report is based on the applicant's letter of  
24 February 2006 (amended description and claims 1 to 11).

## 1. Reference is made to the following document:

D1: US 5 429 796 A (LARSEN, JR. et al.), 4 July 1995  
(1995-07-04)

2. The application fails to meet the requirements of PCT Article 33(1) because the subject matter of claim 1 is not novel (PCT Article 33(2)). Document D1 discloses (the references in parentheses are to D1) a method for producing components, more particularly gas turbine components, from titanium-aluminium intermetallic material. The Ti-Al material is melted in a crucible. The Ti-Al melt contains (in atom%) between 40 and approximately 52% Ti, between 44 and approximately 52% Al, and one or more of the elements Cr, C, Ga, Mo, Mn, Nb, Ni, Si, Ta, V and W, each in an amount of between approximately 0.05 and approximately 8%. Boride dispersoids are added to the melt in an amount of at least approximately 0.5 vol.% of the melt. The melt is poured into a casting mould.

International application No.

PCT/DE2004/002801

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement

The application fails to meet the requirements of PCT Article 33(1) because the subject matter of claim 1 does not involve an inventive step (PCT Article 33(3)).

- 2.1 Dependent claims 2 to 11 do not contain any features that meet the PCT requirements in respect of novelty or inventive step when combined with the features of any of the back-referenced claims (see document D1 and the relevant passages cited in the international search report).
3. Claim 10 fails to meet the requirements of PCT Article 6 because the subject matter for which protection is sought is not clearly defined. The claim seeks to define its subject matter by reference to the result which is to be achieved, but in doing so merely states the problem addressed without specifying the technical features needed in order to achieve that result.
